

Replaces **LANDMARK TOWER!**

As the leader in the mobile arena, Digi embarked on a significant venture to replace its landmark tower at its headquarters on St. Thomas Street, Belize City. The successful replacement of the tower is a One Million Dollar investment which will add to Digi's numerous mobile optimizations across the country.

Since its erection in the 1980's, the tower has been a significant pillar not only as one of the tallest landmarks in the city, but also as one that provides coverage and service to thousands of residents in Belize City. With the erection of the new tower, Digi will replace the 350 ft. structure with a self-supporting base mitigating risks and significantly reducing operational costs for the maintenance of the thirty-year-old tower.

The inherent flexibility of this new tower and its technologies makes it possible to add new service offerings on a dynamic basis as costumers' demands grow and change. This tower will also house important active and backup wireless services for our customers in the Cayes.

"Since its onset in April 2019, the Digi Team has worked tirelessly to ensure minimal disruption in services and have allowed customers the opportunity to enjoy a superb experience," stated Winston Aspinall, Project Manager at Digi. "We are certain that the new Tower will contribute to Digi's Go Beyond strategy."

We are thrilled to continue serving our DigiFans with the best Mobile Experience as the #1 Mobile Service Provider in Belize!
